## NOTABLE PROJECTS

- **Swagbucks:** is a shopping application being used in various countries .The Swagbucks app is the perfect way to extend your earning opportunities wherever you go.Users can earn Swagbucks Points by watching videos, ads and answering surveys. Swagbucks points can be redeemed for shopping at various merchants. **[Dec. 2018 – Present ]**
  - **Technical Description:** This project was designed on VIPER architecture with complete documentation . This product is successfully running internationally.Search Ads are also configured for this app on App store.It includes various types of notifications using urban airship SDK.
  - **Frameworks Used:** IAd, AVFoundation, Button Sdk,Firestore Analytics,Gimbal,Urban Airship etc.
  - **My Role:** I have done complete development Process for Swift.For objective C, I have added some new functionalities and bug fixes in older code.
  - **Appstore:** <https://itunes.apple.com/us/app/swagbucks/id640439547?mt=8>
- **CDR – Construction Daily Reports:** is the fastest & easiest custom daily reporting solution for the construction industry. Customize your reports, enter project details & take pictures & notes through your mobile device. **[June. 2017 – April. 2018]**
  - **Technical Description:** An application which was designed for both iPhone/iPads & supports both the orientation. It was designed on MVC architecture and the product is successfully running in the market.
  - **Frameworks Used:** Alamofire, SwiftyJSON, Google Places, Kingfisher, Apple Mapkit etc.
  - **My Role:** In a team of 2 developers, we've done all the task starting from development to deployment & successfully delivered the project within ETA.
  - **Appstore:** <https://itunes.apple.com/us/app/cdr-construction-daily-reports/id1308127186?mt=8>
- **Mudawi Apps:** A medical app that offers healthcare related services given by certified doctors, User can take audio/video consultation, chat, or can book appointment/personal visits. **[Sept. 2017 – Nov. 2018]**
  - **Technical Description:** This project was having a very short development period and the challenges are many. Showing nearby doctors, integrating VoIP for audio/video calls, integrating chat are few of the features.
  - **Frameworks Used:** QuickBlox (VoIP), Socket IO, FBSDKLoginKit, Google Maps etc.
  - **My Role:** In a team of 2 iOS developers, I've handled the Map based functionality & other core features. All the UI designs, business logic & APIs were integrated by both of us. Even, after so many UI modifications, the project was uploaded successfully on Appstore with given ETA.
  - **Appstore:** <https://itunes.apple.com/us/app/mudawi-doctor/id1293735787?mt=8>
- **ZiFM – Radiostation App:** is a free music streaming service providing free & licensed music. User can also listen to their favorite radiostation & can also chat with RJ. **[ Feb. 2017 – April. 2017]**
  - **Technical Description:** Very few external dependencies were used to make the project compact & loosely coupled. It was included many challenging features like live streaming, chat etc.
  - **Frameworks Used:** Alamofire, SwiftyJSON, Socket IO, AVFoundation, Fabric, JSONWebToken etc.
  - **My Role:** I've worked in a team of 3 developers and develop the Player module for the application. The UI Designs & other business logic implementation were handled equally by the team.
